

# PRIME ALUMINIUM SYSTEM

ALUMINIUM  
FENCING SYSTEM

# PRODUCTS AVAILABLE

The innovative **PRIME ALUMINIUM SYSTEM** construction system, based on dedicated aluminium profiles and innovative technical solutions is a novelty on the market. It is characterised by modularity and elimination of unsightly welds in favour of bolted connections, which makes it possible to assemble the fencing element by element directly at the construction site without the use of specialised tools. With properly selected materials, the structure is durable, stable, maintenance-free and complies with current environmental standards.

The initial offer consists of segments, posts, double windged gates and sliding gates with accessories, although the system will be continually expanded to include other landscaping elements.

ADDON

The **CURTAIN** pattern is an original design that resembles blinds in appearance and layout. Their main advantage is their functionality - they hide the property from the outside, leaving visibility from the inside without blocking the airflow.

OUTER SIDE

INNER SIDE

Modern aluminium fences PRIME ALUMINIUM SYSTEM are manufactured in Poland, more precisely in Lublin. They combine safety, durability and modern design. Each component of PRIME ALUMINIUM SYSTEM has been designed with an emphasis on its reliability, simplicity, lightness and functionality. We offer you a wide range of fillings and colours that successfully match current trends in architecture and construction and allow you to personalise the fence according to your own preferences. The greatest advantage of TABAL's fences is the modular assembly system - the elements are joined seamlessly, which makes the whole structure slender and elegant.

The modularity and versatility of our products enables efficient quotation and realisation of even the most individual order. We are convinced that our innovative aluminium fencing system will add character to any property and meet the expectations of even the most demanding customers. We provide a comprehensive service - we design, install, advise in the choice of fencing, select accessories and deliver it on time.

# ALUMINIUM FENCE SEGMENTS

**SEGMENT** is a basic element for separating spaces with palisade infill available in horizontal or vertical arrangement. It plays an aesthetic role, protecting the property from outsiders while enhancing its visual aspect. The shape of the frame is adapted to the type of infill chosen. The finished element can be assembled to a wall or a system post.

Standard dimensions available:

FENCE SEGMENTS*		
DIMENSION**	WIDTH [mm]	HEIGHT [mm]
[L x H]	L1 = 2000	H1 = 1200
	L2 = 2500	H2 = 1500
	L3 = 3000	H3 = 1700
		H4 = 2000

\* can be ordered to individual dimensions

\*\* the code for the product is formed by the symbols given next to the dimensions

# ALUMINIUM POSTS

**POST** is the basic structural element responsible for the stability of the fence. It can be sunk into the foundation or anchored to the ground. The finished segment, depending on its construction, type of filling and expected effect is assembled to the post either directly through the frame profile or using a set of dedicated angle-adjustable connectors.

## ALUMINIUM WICKET GATES

**WICKET GATE** offered by the system has a reinforced structure based on a double frame profile, ensuring rigidity and stylistic consistency with the other elements of the fence. It is a functional and safe complement to the fence, guaranteeing many years of reliable operation. Optionally, it can be equipped with accessories such as an electric door strike or an external handle. Wickets can be mounted to a system post or directly to the wall.

Standard dimensions available:

WICKET GATES*		
DIMENSION**	WIDTH [mm]	HEIGHT [mm]
[L x H]	L1 = 2000	H1 = 1200
	L2 = 2500	H2 = 1500
	L3 = 3000	H3 = 1700
		H4 = 2000

\* can be ordered to individual dimensions

\*\* the code for the product is formed by the symbols given next to the dimensions

# ALUMINIUM WINGED GATES

**WINGED GATE** is a traditional solution for entering the property based on a frame made of a solid aluminium profile, joined using bolted technology. Thanks to its modular design, it blends in perfectly with other elements of the fence such as wickets and segments. It is available both as a manual version and with automatic control from a remote control, together with the necessary components.

Standard dimensions available:

WINGED GATES*		
DIMENSION**	WIDTH [mm]	HEIGHT [mm]
[L x H]	L1 = 3500	H1 = 1200
	L2 = 4000	H2 = 1500
	L3 = 4500	H3 = 1700
	L4 = 5000	H4 = 2000
	L5 = 5500	
	L6 = 6000	

\* can be ordered to individual dimensions

\*\* the code for the product is formed by the symbols given next to the dimensions

# ALUMINIUM SLIDING GATES

**SLIDING GATE** is a secure solution that combines functionality with a modern look. The gate's construction consists of a solid frame with rail and modular dimensions which combined with other elements of the fence, perfectly complements the property, attracting attention while ensuring the expected level of privacy. Equipped with an automatic system, it allows you to conveniently use the entrance without leaving your car.

Standard dimensions available:

SLIDING GATES*		
DIMENSION**	WIDTH [mm]	HEIGHT [mm]
[L x H]	L1 = 3500	H1 = 1200
	L2 = 4000	H2 = 1500
	L3 = 4500	H3 = 1700
	L4 = 5000	H4 = 2000
	L5 = 5500	
	L6 = 6000	

\* can be ordered to individual dimensions

\*\* the code for the product is formed by the symbols given next to the dimensions

## RAL COLOUR PALETTE

The fencing elements are painted in the standard RAL 9005 (black) and RAL 7016 (anthracite) colours, but upon individual order it is possible to produce the fencing in any RAL colour\*.

\*this involves a longer waiting period

RAL 9005

RAL 7016

## WOOD COLOUR PALETTE

It is also possible to produce infill in wood-like colours and to mix them with infill in RAL colours to create unique designs.
